

Polygon Hunter

GET STARTED

Polygon Hunter is a very easy game to play with, if you use mouse and keyboard, mouse movement and Left mouse button is all you need, If you are using gamepad controller, follow the image at right as a reference

The game is designed to learn the concepts as you are playing, but there are some concepts could be good to know now

1. There are 3 classes of characters, with different aiming skills, if you are playing with gamepad and you find the game too difficult, try with a character that uses target lock, like Sophia.
2. You can play with mouse or gamepad and change the control way even in middle of the action just moving the mouse or the controller.
3. Characters, Weapons and Pickups are upgradeable, and some difficulty levels are intended to upgraded characters, so feel free to start with easy or very easy
4. Some tips... try to stay at medium distance from the polygons, too far is difficult to hit, too close is dangerous, but this changes depending of the character you choose. Think always the best moment to collect weapons and pickups, there is no sense pickup a heart if your health is full, there is no advantage collecting a grow pickup if the polygons in the screen are all big, but very useful if they are small. Archive a great score destroying groups of polygons and thus making combos, collecting food pickups and having a good amount of time left when you finish the stage.

Enjoy!
