Introduction

In Garbage Truck Simulator, you can choose one of three authentic compactor trucks. Drive down the streets and pick up trash of different kinds.

The randomly generated street collection will produce new environments and trash piles every time. Your goal in street collection is collecting as many points as possible within the time limit by picking up the trash. Make sure to skip the dangerous and illegal items

The clearing missions require you to clear the entire building as fast as possible. The time counter will stop as soon as the last item has been crushed in the truck. Watch for items that might be mounted on walls or ceilings as well.

Game physics support real-time destruction and fragmentation without prefabricated debris. Also, squeezable objects are displayed by real-time mesh deformaters. A variety of sounds and textures contribute to the authentic simulation of different materials.

Operation and controls of the trucks are based on the real-life models and will show differences of the compactor systems.

Steam achievements and leaderboards gives you the opportunity to compare your performance to other players worldwide.

Setup and Support

User account on Steam is required. Steam has a minimum age requirement of 13 years to create an account. The game setup is automatically done by the Steam client after installing the game in your library.

If you don't like your player name being displayed on the highscore leaderboards, you can disable highscores in the game options.

If any questions or technical issues occur, do not hesitate to contact support at:

support@abrisssprofi-online.de

These are the minimal and recommended system specs for the game:

64-bit OS Windows 7 or newer, multi-core CPU Intel Core i7-920 2,66 GHz or similar AMD, 8 GB RAM, graphics card with 4 GB VRAM e.g. NVIDIA GTX 970 or AMD RX 580, HDD with 9 GB of free space, DSL internet connection and Steam user account.

The Vehicles

The game contains three realistic compactor trucks:

- Autocar ACX / Leach 2R
- MB Actros / Geesink GPM
- MB Actros / Faun Rotopress

You can ride along between stops on the footboards or in the driver's cab. The open-back compactors require you to keep the button (Space bar) pressed until the packer blade closed the hopper. For the rotary compactor (Shark), it is sufficient to turn it on by pressing the button once.

Help with low Framerrates

If you experience low framerates, toggle off the high-res textures option and the shadow option. Also, you can reduce screen resolution in the graphics options.
