

JETPACK WARRIOR Game Manual

Story Plot

Con-City infiltration

In order to investigate the violence of the robots in the Con-city, secret agents Captain and B cone secretly infiltrate into the city.

B cone detects and investigates internal infectious conditions from robots. Analysis of B cone finds traces of robust security release of robots' security system.

But I was surprised that the traces of the hacking were so different from the usual hacking methods. The hacking method is so simple to unlock and we find a sign that there is a direct alternative code to the security code that seems to know the configuration of the security code system from start to finish.

B-con has come up with the idea that it would be impossible if it were not the master designers of this security system Captains and beacons go to the factory site in Con-city to identify more infectious routes and to crush the robots of the most dangerous factory sites.

Rescue signal from transport of factory site

I received a rescue signal from a massive transporter carrying factory fittings. There were several onboard crew members on the transport, and the rescue signal came from them. B-con, who is in battle with a factory zone robot in the vicinity, tries to access the transport.

The B-Con, which quickly connected to the internal system of transporter, was able to see the process of switching the control of the internal control system and releasing the security code of the transporter. Before the security code is released, they successfully track back the network protocol to determine the location of the connection.

The B-Con is now the source of the robots' infection in military bunkers in mountains 10 kilometers northeast of the site.

Infiltrated into military facilities in the mountains

In order to penetrate into the source of the signal, the captain and the beacon find that there is a gap in their side while looking for a path that can be taken I found a gap formed by earthquake and erosion, and through this I found a route to the source of the signal. A highly trained captain can move safely through a darkened cave that is narrowly connected, and he can be sure that the Special Agent BCon is safe.

The captain snuggles in as he sees through the dark gaps of unknown depth. Captain soon finds strange robots. These robots are seen as robots made to battle for the narrow terrain, and these robots have never been seen before. The beacon did not report this information, but Captain, who met these robots in a dark cave area, is embarrassed.

Battle at the final destination

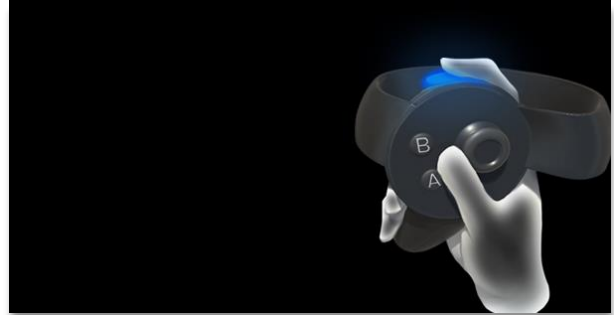

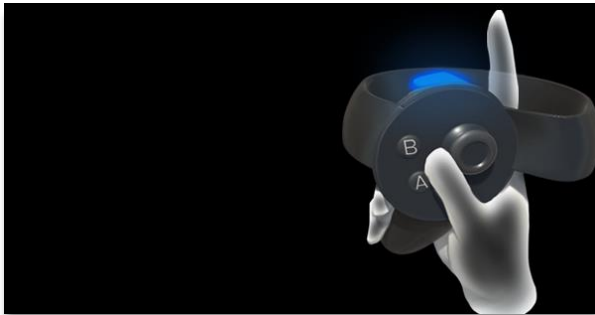

In previous generations, you can see the entrance to the military area used as a secret bunker, and the captain arrives here and enters. I am surprised that the unknown presence of the captain is more bizarre than I thought.. There was a huge head-shaped machine floating in the sky, and it was a machine that spit out many unknown words. There were a lot of fragments that looked like mirrors floating around, but I could not guess which object it was. The robots floating in the air were constantly talking. Now I felt it was noisy. Among those words was a warning about the intruder and a lot of other stories, but I never knew why I kept talking about it.

In the meantime, the glass manipulations that did not move slowly began to unite as one, and the defense system of this robot seemed to be starting up. When these pieces united together, they were combined into spherical objects made of huge objects. It seemed obvious that he was hostile to the captain. These fragments, which suddenly scattered, fired strong laser light toward the captain. The Captain is immediately ready for battle.

Basic Operation

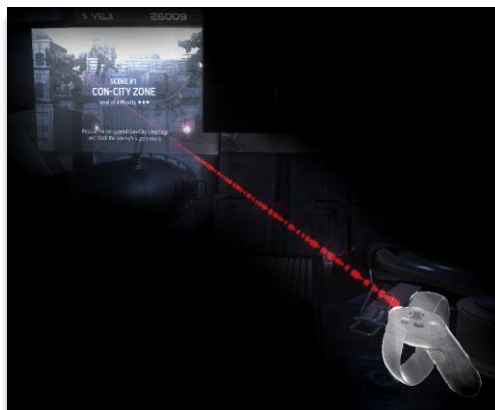

Trigger Button

The trigger button is a blue button that can be pressed with your index finger as shown below. The Trigger button is used to trigger all actions, such as selecting a menu or launching a gun.

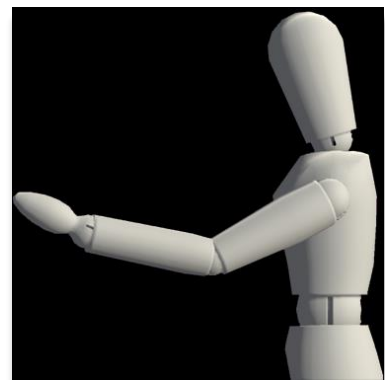

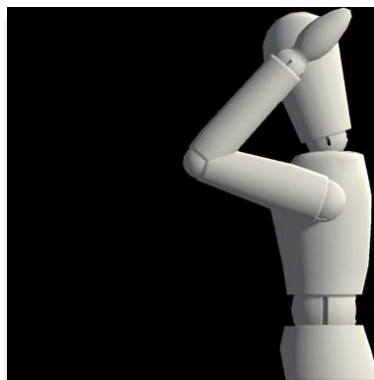

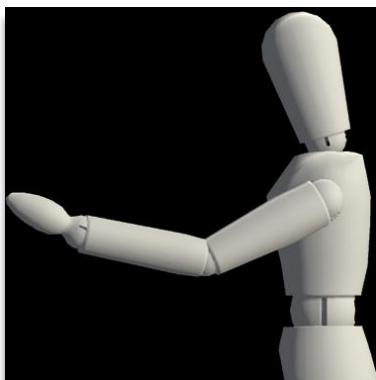

How to choose a menu

The selection processing of the menu and the UI buttons appearing in the game is made by a straight laser from the controller. You can select or pick objects that pass through the laser. The choice is basically a trigger button .

Reload and fire during game

As the game progresses, the weapons I can deal with are two guns in both hands. The gun of this gun is unlimited, and the magazine is finite, so if the magazine falls, it must be reloaded. To reload, simply raise and lower the controller as shown below.

Press the trigger button to fire the gun. Press and hold to fire the bullet continuously.

How to defeat an enemy bullet during a game

You can defeat enemy bullets. When I hit the gun I have, I blow up all the bullets. Do not be afraid when the bullet is flying..

Available guns

There are 4 different guns to choose from in the weaponry, and you can pick each one according to your hands.

ASSULT RIFLE  연사력 ----- 사거리 ----- 공격력 ----- 탄창용량 -----	ASSULT RIFLE It is a versatile gun suitable for beginners. Advantages: Because it has a lot of magazines and good firerate, it does not require much reloading. Disadvantages: The attack power is weak. There is a difficulty in destroying the enemy in a short time
PISTOL  연사력 ----- 사거리 ----- 공격력 ----- 탄창용량 -----	PISTOL It is an intermediate gun that enjoys raging with powerful damage. Advantages: It gives explosive damage because of its high level of power and damage. Disadvantages: Accuracy, range, and magazine are low, demanding tricky operation.
LASER RIFLE  연사력 ----- 사거리 ----- 공격력 ----- 탄창용량 -----	LASER RIFLE Stable gun for beginners. Advantages: It does not require a lot of reloading because it has a lot of magazines and good firerate. Disadvantages: Short range makes it unsuitable for long range attacks
DOUBLE RIFLE  연사력 ----- 사거리 ----- 공격력 ----- 탄창용량 -----	DOUBLE RIFLE It is a gun for the intermediate player who likes critical damage by precision blow. Advantage: The range is very long, the attack power is high, and two bullets are fired. Double Damage. Disadvantages: Very low firerate, only for precise striking, It is a gun for intermediate players.

Screen picking weapons from weapons warehouse.

Monsters

ENGINEER DRONE

It is a robot that is often seen on roads and factory areas.

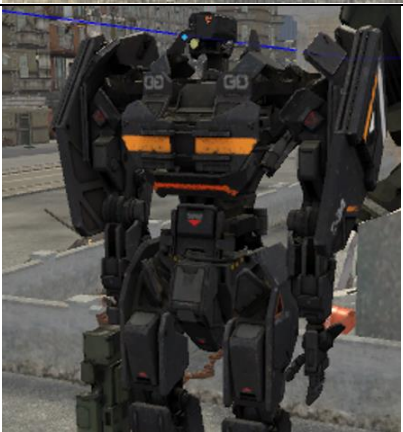

These robots mainly serve to repair or inspect automated machines in factory production systems, and they can be moved freely anywhere in the air, so they can be seen everywhere as a worker robot..

R2 ENGINEER DRONE

Engineer drone and other products produced in the latter half of the year are made up of better multiprocessing capabilities and sophisticated and fast-moving observations.

Sometimes infected, these robots show an attack rate that is a threat to the captain.

PATROL ROBOT

Developed as a role to support the police in the city, this robot has been applied sophisticated robotic technologies to move like a human, and has basic combat functions for policing in the city. There are programs that deal with various weapons and related programs in combat.

Introduced as a combat posture, these robots turn against the toughest.

MILITARY PANZER

It is an armored vehicle developed for military purposes. It is equipped with a basic 360-revolving turret to enable all-weather combat. It has tremendous armor defense and maneuverability.

ROCKET SPIDER ROBOT

Developed for observation in urban and factory areas, the robot is equipped with an observation infrared lens and a radar system.

Because they have powerful communication systems and location tracking capabilities, these missiles will haunt you with guided missiles that track you down to the end.

MILITARY BOX ROBOT

Developed as a military robot, it is a tactical robot designed to perform tactical combat.

It can be moved to a camouflaged container, and it can be converted to an attack type robot, which can be used for surprise attacks. Due to the strong outer gloves and the internal structure designed to absorb the impact of the ground, aerial delivery is possible anywhere. It also plays a role of airborne ground penetration from the transport.

MILITARY DRONE

Drones are battle robots. It is a drones robot that is designed to be able to fight in the state of flying. These drones have begun to be developed as small units, but they are medium-sized drones equipped with various fighter planes for combat purposes and strengthened their gloves to enhance air-to-ground or ground-to-air combat capabilities.

This robot was never observed in Concicy was first observed in combat with infected transports. In Concicy, it was originally confirmed that small battle robots were assembled by several defense companies, but the appearance of large armored robots was reported by some beacons that some assemblies were transported by this transport.

TRANSPORTER SHIP

This massive airship, which was developed as a transport vessel, was built with the purpose of transporting material from the factory site. When a beacon entered a central control system of a transport, a route to transport the material to an unexpected place was observed. I have hidden the secrets of what purpose they are hiding, but I suspect that the core parts of the large armored robots would have been transported.

When the transporter was infected, it provided a clue to trace the path of the infection due to the rescue signals of the passengers on board..

SCORPION BOT

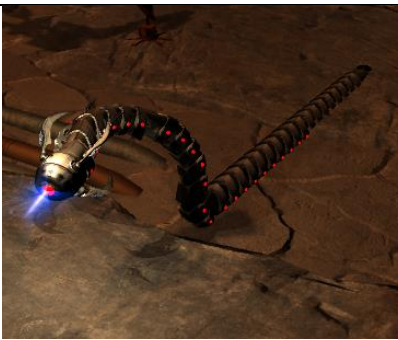

This is the first observed robot that has not been reported so far. It is designed to keep the compact body suitable for moving in small gaps and to move confidently through narrow gaps through multiple legs. Laser beam attack at the tail. Attached to the gap in the cave everywhere, It aim for you.

SPIDER BOT

This is the first observed robot that has not been reported so far. According to Captain, these robots are looking at me everywhere, crawling toward me and jumping to me in order to pierce me with their sharp claws.

It is said that the robot's welcome is sometimes seen because it bothered the captain too much.

SNAKE BOT

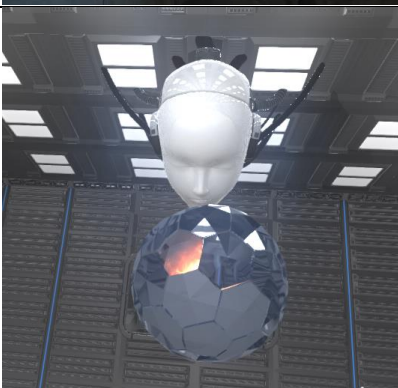

This is the first observed robot that has not been reported so far. This robot is a slippery moving method that makes it sound almost silent. It moves without sound and attacks a powerful laser beam. A melee attack that makes a powerful leap is without hesitation. The tail is equipped with a sharp double-edged sword. You can also see a horrible standard blade in front of you..

TURRET BOT

It is a defensive robot that is used as a defense system in underground military facilities. It is developed as a robot that tracks simple movements and attacks. However, if communication module is upgraded, it can be attacked by surrounding monitoring or remote control.

This robot, which is installed in several gateways built into a subterranean bunker in a cave crevice, appears to be some of the remaining robots for the purpose of protecting past underground military installations.

CORE OF INFECTION

Anomalies of Robots in ConCity was a problem caused by breaking into the central control unit of robots and changing the core AI codes. Because it penetrated the intrusion path and the security system of the robots so easily, guessed it to be the work of a specialist with a vast knowledge of robots and computer systems

Captain, who succeeded in tracking the position of the signal, traced the source and confirmed that it was a very large intelligent supercomputer, and had an external interface to shape his face and communicate his feelings.

This intelligent computer system runs spheres that are divided into 32 pieces for their defense, which is seen as a special material that is not destroyed. At the time of fragmentation, the center of the core is exposed, but the captain succeeds in attacking and destroying it..
